

# <E0/>

As a Software Engineer, I am a skilled problem-solver and innovative thinker with expertise in multiple programming languages. I excel at designing and developing efficient, high-performance software solutions while staying up-to-date with the latest industry trends and standards.

💍 Software Engineer

talent@softescu.com

## Technical Experience

Total experience in programming languages and web technologies relevant to my current role.

HTML/CSS	5 years of experience
JavaScript	5 years of experience
TypeScript	4 years of experience
Angular	4 years of experience

### Additional skills

### Technical Assessment

The maximum score is 100% if all answers are correct. Tests are conducted annually at Softescu and compare me with peers who have similar roles and experience.

JavaScript	100%
TypeScript	100%
HTML/CSS	100%
Angular	65%

## My Badges

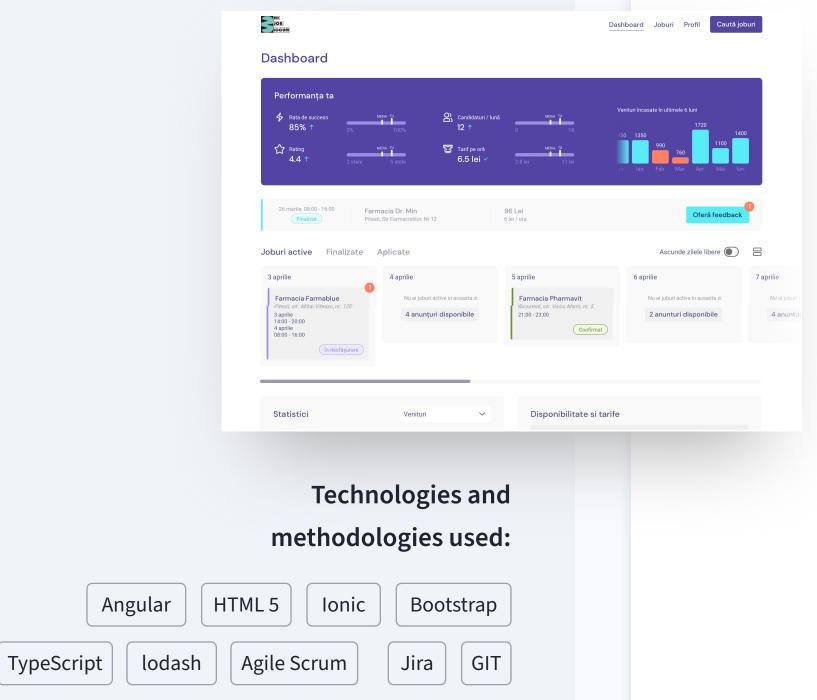

The following badges can be awarded within Softescu:

- Commitment badges based on the length of employment within the organization,
- Performance badges based on monthly average code productivity

# Portofolio

A few of the past projects I've worked on and my role within them.

### Locum App

The Locum project is a platform for Pharmacies and Pharmacy Chains to hire and work with pharmacists of varying skill levels on a contractor/ freelance basis. With a focus on simplicity and speed - from posting a job ad to filling the position - Locum aims to be the go-to platform for connecting pharmacists with open positions in the pharmaceutical industry in Romania.

Key features:

- Friendly user interface
- Cross platform: available for both Android and iOS
- Messaging

۲

- Well-documented onboarding procedure
- Good systems to vet contractors (pharmacists) and ad posters (pharmacies or pharmacy chains)

Role in the project: Angular Developer

My main activities and responsibilities:

- Developing responsive, usable, and accessible websites for better user experience and satisfaction.
- Actively participates in development/design sessions with product designers to create a reusable and accessible UI library for rapid UI development.
- Designing and developing single-page applications and architecture using Angular framework to reduce load time bottlenecks for user experience.
- Refactoring and designing a more maintainable and scalable architecture using the latest version of Angular and Ionic which helped improve customer satisfaction.
- Robust implementations of well-proven validated solutions within the Ionic Community and using mostly ionic components while keeping external dependencies at a minimum level, reducing mobile application bundle size and load time.
- Reports the status of the project in the internal workflow management platform for better management of project delivery time.
- Building internal libraries which help improve productivity during the process of application development.
- Adheres to the quality control standards
- Contributes to the activities of the Angular and Ionic community
- Constantly studying and proposing new solutions to projects

### **Optimerix Website**

Captivating landing page website developed for promoting the Optimerix app, a mobile app for residents of Romania to manage their administered drug prescriptions digitally. The website has also the blog functionality.

### Key features:

- Langing page build with paragraphs to ease content update
- Contact form Blog functionality

### Role in the project: Angular Developer

### My main activities and responsibilities:

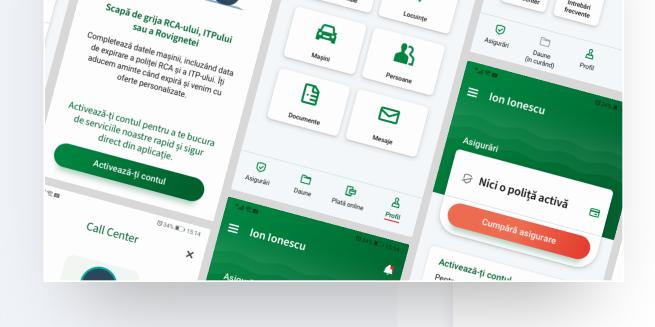

- Developing responsive, usable, and accessible websites for better user experience and satisfaction.
- Actively participates in development/design sessions with product designers to create a reusable and accessible UI library for rapid UI development.
- Designing and developing single-page applications and architecture using Angular framework to reduce load time bottlenecks for user experience.
- Refactoring and designing a more maintainable and scalable architecture using the latest version of Angular and Ionic which helped improve customer satisfaction.
- Robust implementations of well-proven validated solutions within the Ionic Community and using mostly ionic components while keeping external dependencies at a minimum level, reducing mobile application bundle size and load time.

online system for purchasing and managing insurance policies. To access these services, Omniasig customers will have to download the application on their personal device and go through a registration flow, based on the phone number and a unique access code, after which they will have the opportunity to view existing policies and purchase other insurance.

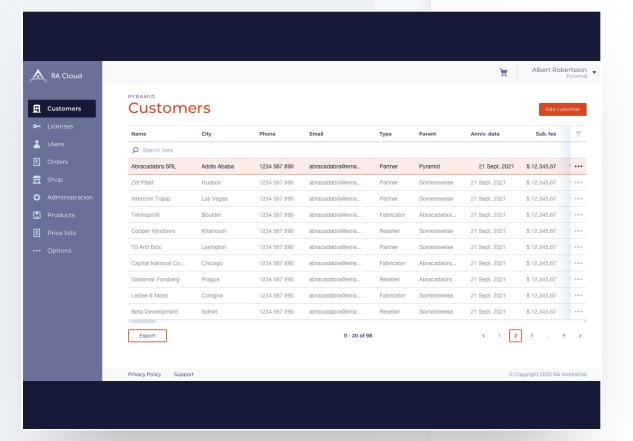

### Key features:

- Register user accounts;
- Purchase 2 types of household insurance;
- Policy insurance management;
- Mobile application, available on the App Store and Google Play;
- A backend system (OMN Backend)
- An administration system (OMN Admin UI) available from VPN.
- The application was implemented using Ionic with Angular for the administration interface. The backend is implemented using .NET Core.

#### Role in the project: Angular | Ionic Developer

### My main activities and responsibilities:

- Developing full UI part of application utilizing HTML5, SCSS, Ionic UI Component for mobile experience.
- Creating of new markupsmarkups/components for pages, extended old ones.
- Developing new software functionalities according to the user requirements.
- Development of the applications functionalities using the Ionic UI components
- Designing and developing the project, ensuring strong functionality, usability and optimisation.
- Providing reports to the project manager.
- Involved in troubleshooting, incident resolution and performance optimisation activities.
- Developing custom modules to support reporting and workflow client's requirements.

### RA Workshop

### **RA Cloud**

This project is a tool for all Pyramid Clients that will allow them to configure their organization, to manage subscriptions and access resources. All existing or new Pyramid products, part of Ra family, will be accessible through this platform and will use the same authentication and authorization system.

#### Key features:

• role permission per pages / functionalities for groups / type of users

Role in the project: Angular Developer

### My main activities and responsibilities:

- Developing full UI part of application utilizing HTML5, CSS3, SCSS, bootstrap features for desktop screen size experience.
- Creating of new markups/components for pages, extended old ones.
- Developing new software functionalities according to the user requirements.
- Development of the applications functionalities using the Ionic UI components
- Designing and developing the project, ensuring strong functionality, usability and optimisation.
- Providing reports to the project manager.
- Involved in troubleshooting, incident resolution and performance optimisation activities.
- Developing custom modules to support reporting and workflow client's requirements.

### Certifications

My certifications and awards.

**Objectives** 

To improve on my skill set (Design System) and to work on my leadership skills.

My career plan for the current year.

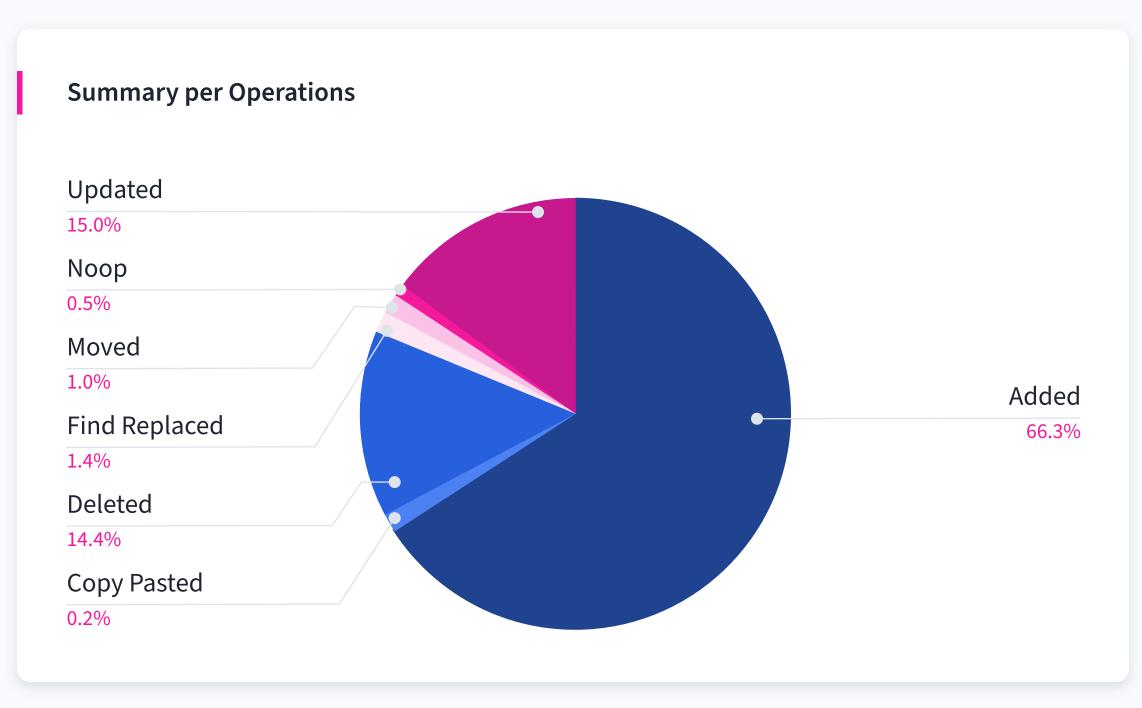

### Work Experience

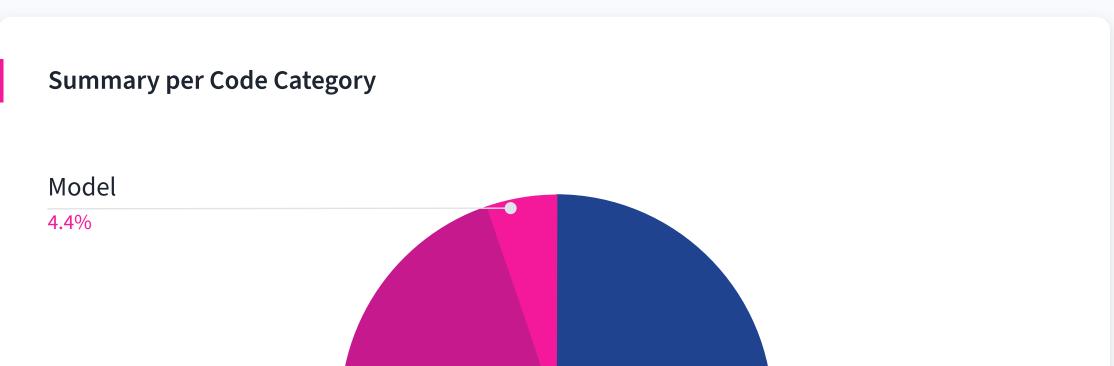

Previous work experience.

### 2022 Overview

The annual overview is automatically computed from the analysis of all your Git commits.

Based on individual assessment, across whole organisation and normalized across the technology stack.
